VIRTUAL REALITY AND AUGMENTED REALITY

1

VIRTUAL REALITY

Virtual Reality is a technology that creates imaginary spaces and objects similar to real ones. To see and enter these spaces, and relate to these objects, we need virtual reality glasses.

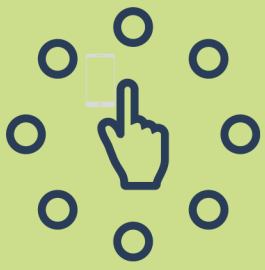
Virtual reality is used:

- In movies and video games.
- In education.
- In Tourism (Ex.: virtual trips, museums).
- In mental health care (e.g. working on memory, phobias or depression).

2

AUGMENTED REALITY

- **Augmented reality is a technology that combines real and virtual elements.**
- Unlike virtual reality, in which everything is created and we need glasses or a helmet to see it, augmented reality adds only some virtual elements to our reality.
- And we can use it with our mobile phone, tablet or computer.



3

USES OF AUGMENTED REALITY

Augmented reality is used:

- In video games.
- In the fashion world.
- In design and decoration.
- In publicity.
- And also in tourism.
